## Superior Broadband Acoustic Control

When only the best will do, discriminating home theater owners insist on ASC's Acoustic Soffit System as part of their acoustic treatment package. This is an acoustically engineered product that anybody with reasonable DIY skill can install easily. The best part is that regardless of your interior design, the ASC Soffit fits right in. In a nutshell, you hear much more sonic detail produced by your speakers, instead of fuzzy echoes. Plus, the soffit can be part of the room lighting, HVAC vents, all depending on your desire. Everybody in the family will enjoy the understated "built-in" looks and the improvement in sound and dialog.

## When Only the Best Will Do

With hundreds of hours of real world testing, ASC's engineering and product development technicians have produced the best acoustical soffit available anywhere. Acoustic

engineers have known for hundreds of years that a soffit is an excellent sound diffuser. ASC improved the idea to combine absorption, diffusion and bass trapping. Choose from 7 in-stock fabric colors, or for a modest additional cost, 60+ custom colors. Standard size is 10" x 16", or choose custom sizing to allow for optional wiring, HVAC and lighting. Most home theater soffits are not only expensive, but they are not engineered for acoustical performance.

## The Bottom Line

The ASC Acoustical Soffit System is an elegant, one-product solution to improving the acoustics and sonic detail in your home theater. It is reasonably easy to install for anyone with a moderate skill level. All home theaters should include a soffit. ASC's Acoustic Soffit makes it possible at a fraction of the cost of an installed acoustic package.
